Experience

SEP 2023 - PRESENT

Web Developer – *Experian*

- Develop an automated staging tool with Node.js and React that integrates real-time data synchronization with Google Drive API to increase staged article production from 8/day to 10+/hour.
- Implement real-time content tracking using an API-driven app built with vanilla JavaScript that integrates with Wrike's API via a user-friendly UI, reducing compliance violations by streamlining content management workflows.
- Ensure consistent branding and user experience across the blog platform with 99.9% uptime by performing weekly theme updates and maintenance checks on the custom WordPress theme.
- Develop and deploy custom landing pages from provided Figma mockups, ensuring precise design implementation that effectively engages target audiences while driving over $100k in revenue through market entry into emerging markets.

Facts

Self-taught developer | Background in finance and accounting | Blogger and content creator
